

InFocus is proud to announce that our engineering team members Oxana Scheming, Ph.D, and Erin Venables have been awarded “Women in Engineering” recognition by SOLIDWORKS!

The SOLIDWORKS Women in Engineering Program (WIE) was created to help recognize the outstanding achievements that women are accomplishing day to day in the engineering field and community around the world.

In recognition of this achievement, SOLIDWORKS is flying Oxana and Erin to Boston to meet the SOLIDWORKS team and attend the 2018 SOLIDWORKS Live Launch Event at the Dassault Systemes North American Headquarters on September 25th and 26th.

On Monday they will meet key players within the SOLIDWORKS organization who directly impact day-to-day use of the software. They will find out what's new in SOLIDWORKS from members of the Product Introduction team, and network with SOLIDWORKS executives.

On Tuesday Oxana and Erin will be on-hand as SOLIDWORKS 2018 LIVE is presented livestream by CEO Gian Paolo Bassi, and Vice President of Portfolio Management, Kishore Boyalakuntla. That afternoon there will be forum discussions between all Women in Engineering award recipients and the SOLIDWORKS Product Definition team. A wide range of products and topics will be covered, then questions and suggestions will be heard.

InFocus is excited for the future of SOLIDWORKS and our Engineering team, and we look forward to delivering more unique downhole tools and rapid-response engineering services to our valued Customers. Congratulations Oxana and Erin for this prestigious award - enjoy your trip!
