

InFocus will be presenting at the Global Geothermal Energy Summit 2017 in Amsterdam, November 29th and 30th.

Mr. Geoffrey Samuel, P.Eng of InFocus will be giving a presentation titled "New Technology: Enhanced Geothermal Drilling Solutions" where he will focus on the enormous advantages that metal-to-metal technology will bring to the geothermal industry.

The Geothermal Energy Association (GEA) estimates that only 6.5 percent of total global potential has been tapped so far. With recent developments in the industry, unlocking the potential for new untapped sources of geothermal energy production, we are entering a new dawn for the geothermal energy industry.
